Improving the Energy Efficiency of Buildings

Full Day Conference

**Wednesday, November 16, 2022 (approx. 8 – 5)
Ottawa Conference and Event Center
200 Coventry Road, Ottawa**

Everybody involved with buildings today has a challenge in front of us: find ways to cost effectively improve the energy efficiency of existing buildings, and concurrently reduce the carbon footprint of these buildings. BECOR and BOMA are collaborating in a full day conference to share information related to the challenge of improving the energy efficiency of buildings.

Possible presentation topics include:

- Building envelope details which cause the most energy waste, and how to correct them.
- Cost effective means to prevent thermal bridging from draining energy through the walls.
- Benefits to replace or upgrade obsolete glazing using high performance products.
- Innovative new methods of building recladding while maintaining occupancy.
- Government direction and available programs to help subsidize capital costs.
- Ongoing performance monitoring of building, to ensure optimum energy performance.

CALL FOR PAPERS - PRESENTERS NEEDED!

We are still looking for volunteers to present on “Improving Energy Efficiency of Existing Buildings”. If you would like to share a presentation at this conference, please submit an outline summary of your topic, and a brief bio (about you), to slaviolette@patersongroup.ca, before October 14, 2022.

The Boards of Directors for BECOR and BOMA Ottawa will review the submissions and reply to the presenters within one week of the submission deadline. A detailed lineup will be announced three weeks in advance of the conference.
